

# **TSDC**

# Adiabatic cooling

# Key benefits

- Empowers transcritical CO<sub>2</sub> applications in warmer climates
- Minimum system energy
- Low installation cost

#### TSDC, TrilliumSeries characteristics

Counter flow, adiabatic pre-cooling, axial fan, induced draft

### **Typical applications**

• supermarket refrigeration systems

## For transcritical CO<sub>2</sub> applications in warmer climates

- No regulatory liability or restrictions.
- No expensive future retrofits due to refrigerant phase out.
- Reduced system carbon footprint with global warming potential of "1" and ozone depleting potential of "0".
- Low installed cost due to lower refrigerant cost and no refrigerant tax.

Energy efficient, economical transcritical CO<sub>2</sub> systems with air cooled gas coolers are limited to colder climates due to the limitations of the dry bulb ambient temperature.

By using the TrilliumSeries condenser's **unique adiabatic design**, it is possible to reduce the air temperature and hence improve the system efficiency. **Transcritical CO<sub>2</sub> systems** can now be **applied to southern regions** with higher ambient temperatures and additional **energy can be saved in cooler climates**.

## Minimum system energy

- Up to 37% annual system energy reduction by operating at lower condensing temperatures.
- Direct drive variable speed EC motors minimize fan energy required.

#### Low insallation cost

- Reduces overall system size and pressures by operating at lower CO<sub>2</sub> temperatures.
- Shrinked size of the rack and reduced weight.
- Lower refrigerant charge than comparable air cooled condensers.

#### Minimal maintenance

- No water treatment required.
- Requires the same time to maintain as an air cooled condenser.

## Long term reliability

 Industrial grade Type 304 Stainless Steel and an exclusive Thermosetting Hybrid Polymer coating on all structural panels.

#### Low sound

- Lower airflows due to the unique adiabatic design result in low sound levels.
- Whisper Quiet fans are standard.
