

BAC Cooling tower fan motors

Spare parts guide

BAC Cooling tower fan motors

Motors

Make sure your replacement motor keeps going!

BAC uses **top quality motors** that reliably operate in the harsh cooling tower environment. This results in less motor failures, downtime, and replacements. All our motors have **unique specifications** thanks to joint development with our motor suppliers.

Your BAC cooling tower fan motor

- prevents premature motor failure
- decreases downtime
- maximizes lifetime

Typical cumulative failure rate* vs years of operation

* based on BAC Service Statistics

The failure rate of third party motors during the first 3 years in operation is 7 times higher than that of BAC motors.

Why do BAC cooling tower fan motors last longer?

Because they integrate a combination of **standard and specific** features.

Standard features:

- Terminal box and cable gland position lay-out depends on the motor position of the unit, this ensures best access for wiring, sufficient travel

for belt tension and protection against water ingress

- TEFC Totally Enclosed Fan Cooled
- IE2 energy efficient / IE3 optional
- IP 55 rating / Insulation Class F
- C3 tolerance bearing

Specific features:

Attention :

AVAILABILITY - All common single speed motors are available from stock!
