

BCP 2 C

Water treatment and filtration equipment

BCP 2 C

BCP 2 C control package

Control package for accurate **liquid chemical based water treatment** for evaporative cooling systems.

It includes:

- water meter controlled proportional dosing of a scale and corrosion inhibitor
- automatic conductivity controller of dissolved solids through blow-down
- automatic time based dosing of biocide(s)

Benefits:

- **Simplicity:** one controller, pre-mounted
- **Easy to maintain:** sampling valves for easy inspection, integrated chemical injection point
- **Performance:** bleed lock-out function for biocide action
- **Reliability:** motorised bleed valve
- **Savings:** flow controller prevent chemical overfeeds
- **Flexibility:** suitable for all cooling systems
- **Compatibility:** for a variety of chemical products

Together with the implementation of a **monitoring programme** the BCP 2 C control package provides effective and safe control of the water quality and bacteriological growth, including Legionella.

Want to install an automatic bleed control on your BAC equipment? Contact your [local BAC representative](#) for help.
