

# Sound attenuation

## Refrigerant condensers

### Options and accessories

#### Sound attenuation

VCL condensers use **quiet centrifugal fans**, but to reduce noise even further, you can extend your VCL condenser with sound attenuators at the air intake and discharge points.

#### For residential areas:

##### Sound attenuation ([HS type](#))

- Discharge attenuator with vertical baffles
- Intake attenuator with straight baffles

#### For rural areas:

##### Heavy sound attenuation ([HD type](#))

- Discharge attenuator with vertical baffles
- Double intake attenuator with straight baffles

Your [local BAC representative](#) can explain any of the above sound attenuator options in more detail and provide you with [sound pressure and sound power data](#).
