Closed circuit cooling towers

Options and accessories

Sound attenuation

FXVE closed circuit cooling towers use **quiet and low kW axial fans**, but to reduce noise even further, you can extend your FXVE cooling tower with sound attenuation:

- cylindrical baffles at the air intake
- insulated discharge attenuator without baffles

or choose the Whisper Quiet fan alternative.

Your <u>local BAC representative</u> can explain any of the above sound attenuator options in more detail and provide you with <u>sound</u> pressure and sound power data.
