Evaporators

Options and accessories

Below is a listing of the main options and accessories. If your required option or accessory is not listed, look no further than your [local BAC representative](#).

Drain pan electrical defrost

Electric elements are clamped to the bottom of the drain pan, effectively heating the pan bottom to provide quick defrost.

Drain pan hot gas defrost

Stainless steel hot gas circuit is provided and clamped to the bottom of the drain pan for maximum heat transfer to the pan.

Drain pan insulation

The drain pan can be insulated when either hot gas or electric defrost is required to contain the heat inside the drain pan or if there is a risk of condensation occurring on the underside of the drain pan. Insulation covers are constructed from self-healing [Baltiplus 800](#) TM.

Reheat coil

Finned reheat coils produce continuous dehumidification and reduce sweating by heating the air after it leaves the cooling coil section. The reheat section is separated from the cooling section by an air break

Air discharge alternatives

These include:

- Fans selected for external static pressure
- Draw through and blow through options are available.

Additional uses

Increasingly, our product has also found use more industrial applications such as oil coolers for transformer oil and heat recovery applications.
