

# Options and accessories

## Adiabatic cooling

### Options and accessories

Below is a listing of the main TVFC options and accessories. If your required option or accessory is not listed, look no further than your [local BAC representative](#).

#### Flanges

Flanges facilitate **pipng connections** on-site.

#### Epoxy coating

Increase the coil's resistance against a harsh atmosphere.

## Coil freeze-up safeguard

Allow for operation without any anti-freeze agents and avoid a coil freeze-up risk at the same time.

## Sound reduction

Reducing noise at air **intake and discharge points** brings us closed to silent cooling equipment.

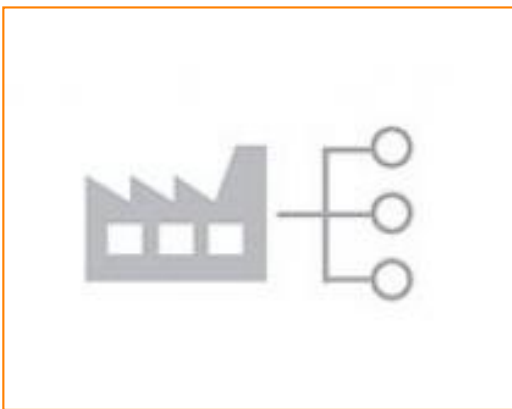

## Partitioning panels

Increase the degree of redundancy, providing a higher backup capacity for your installation.

### Recirculation pump

The recirculation pump helps to further cut down on water consumption.

### BMS supervision

This option integrates the adiabatic cooler's control system in your BMS system.

### Safety switch

Cuts power to motor with **safety in mind** during inspection or maintenance.

## Electrical panel heater

Protects electronic components in the electrical panel during extremely cold temperatures.
